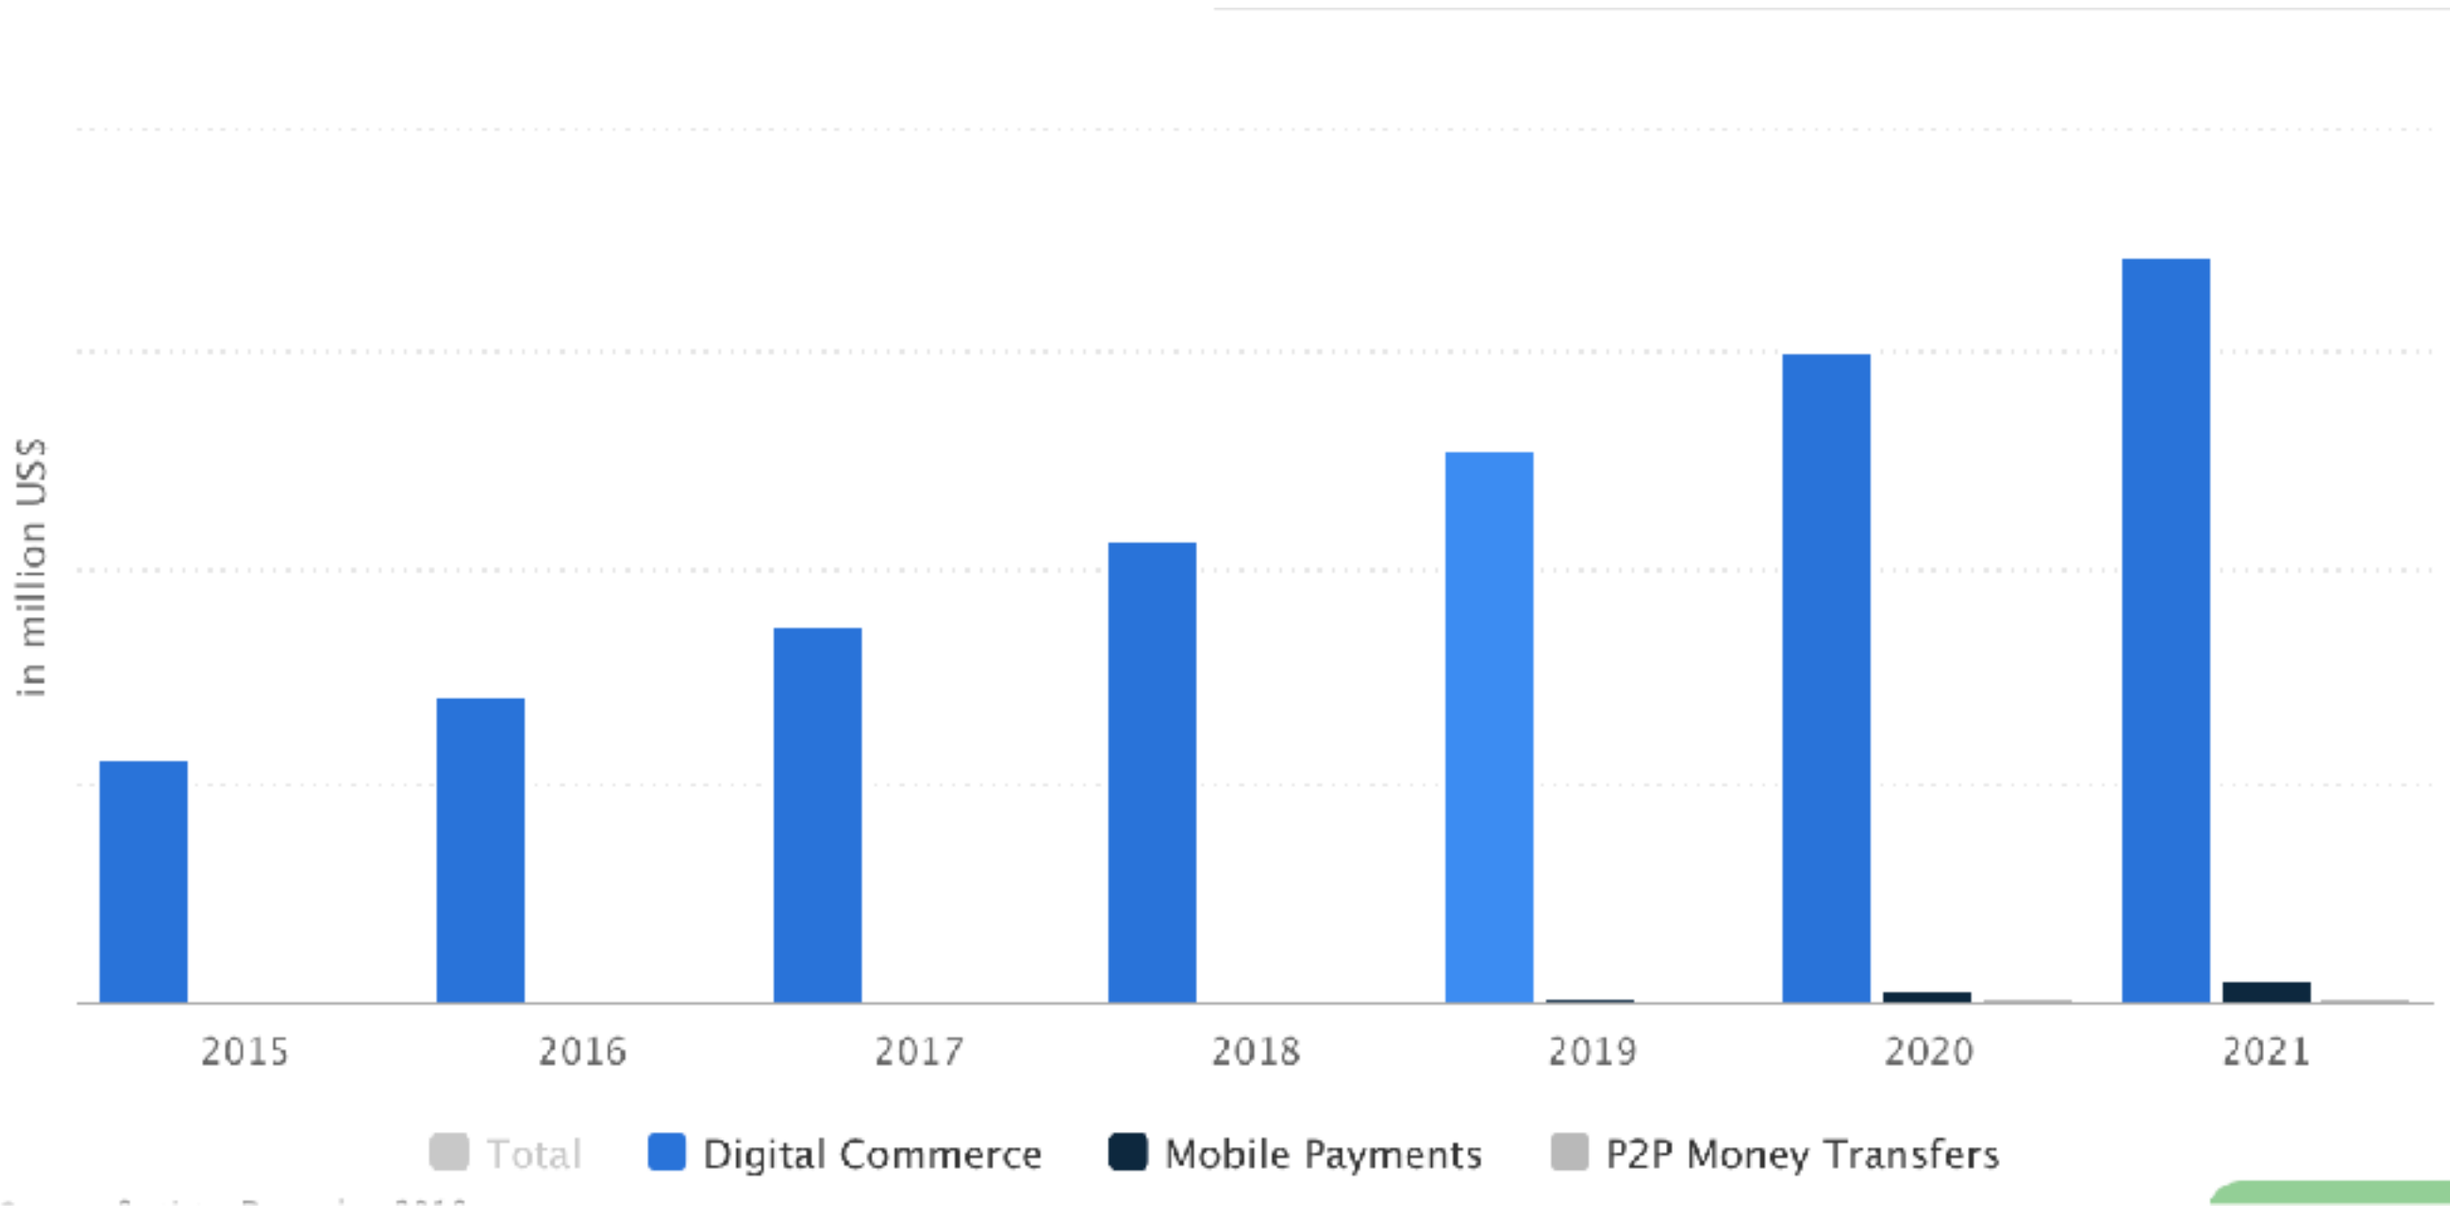
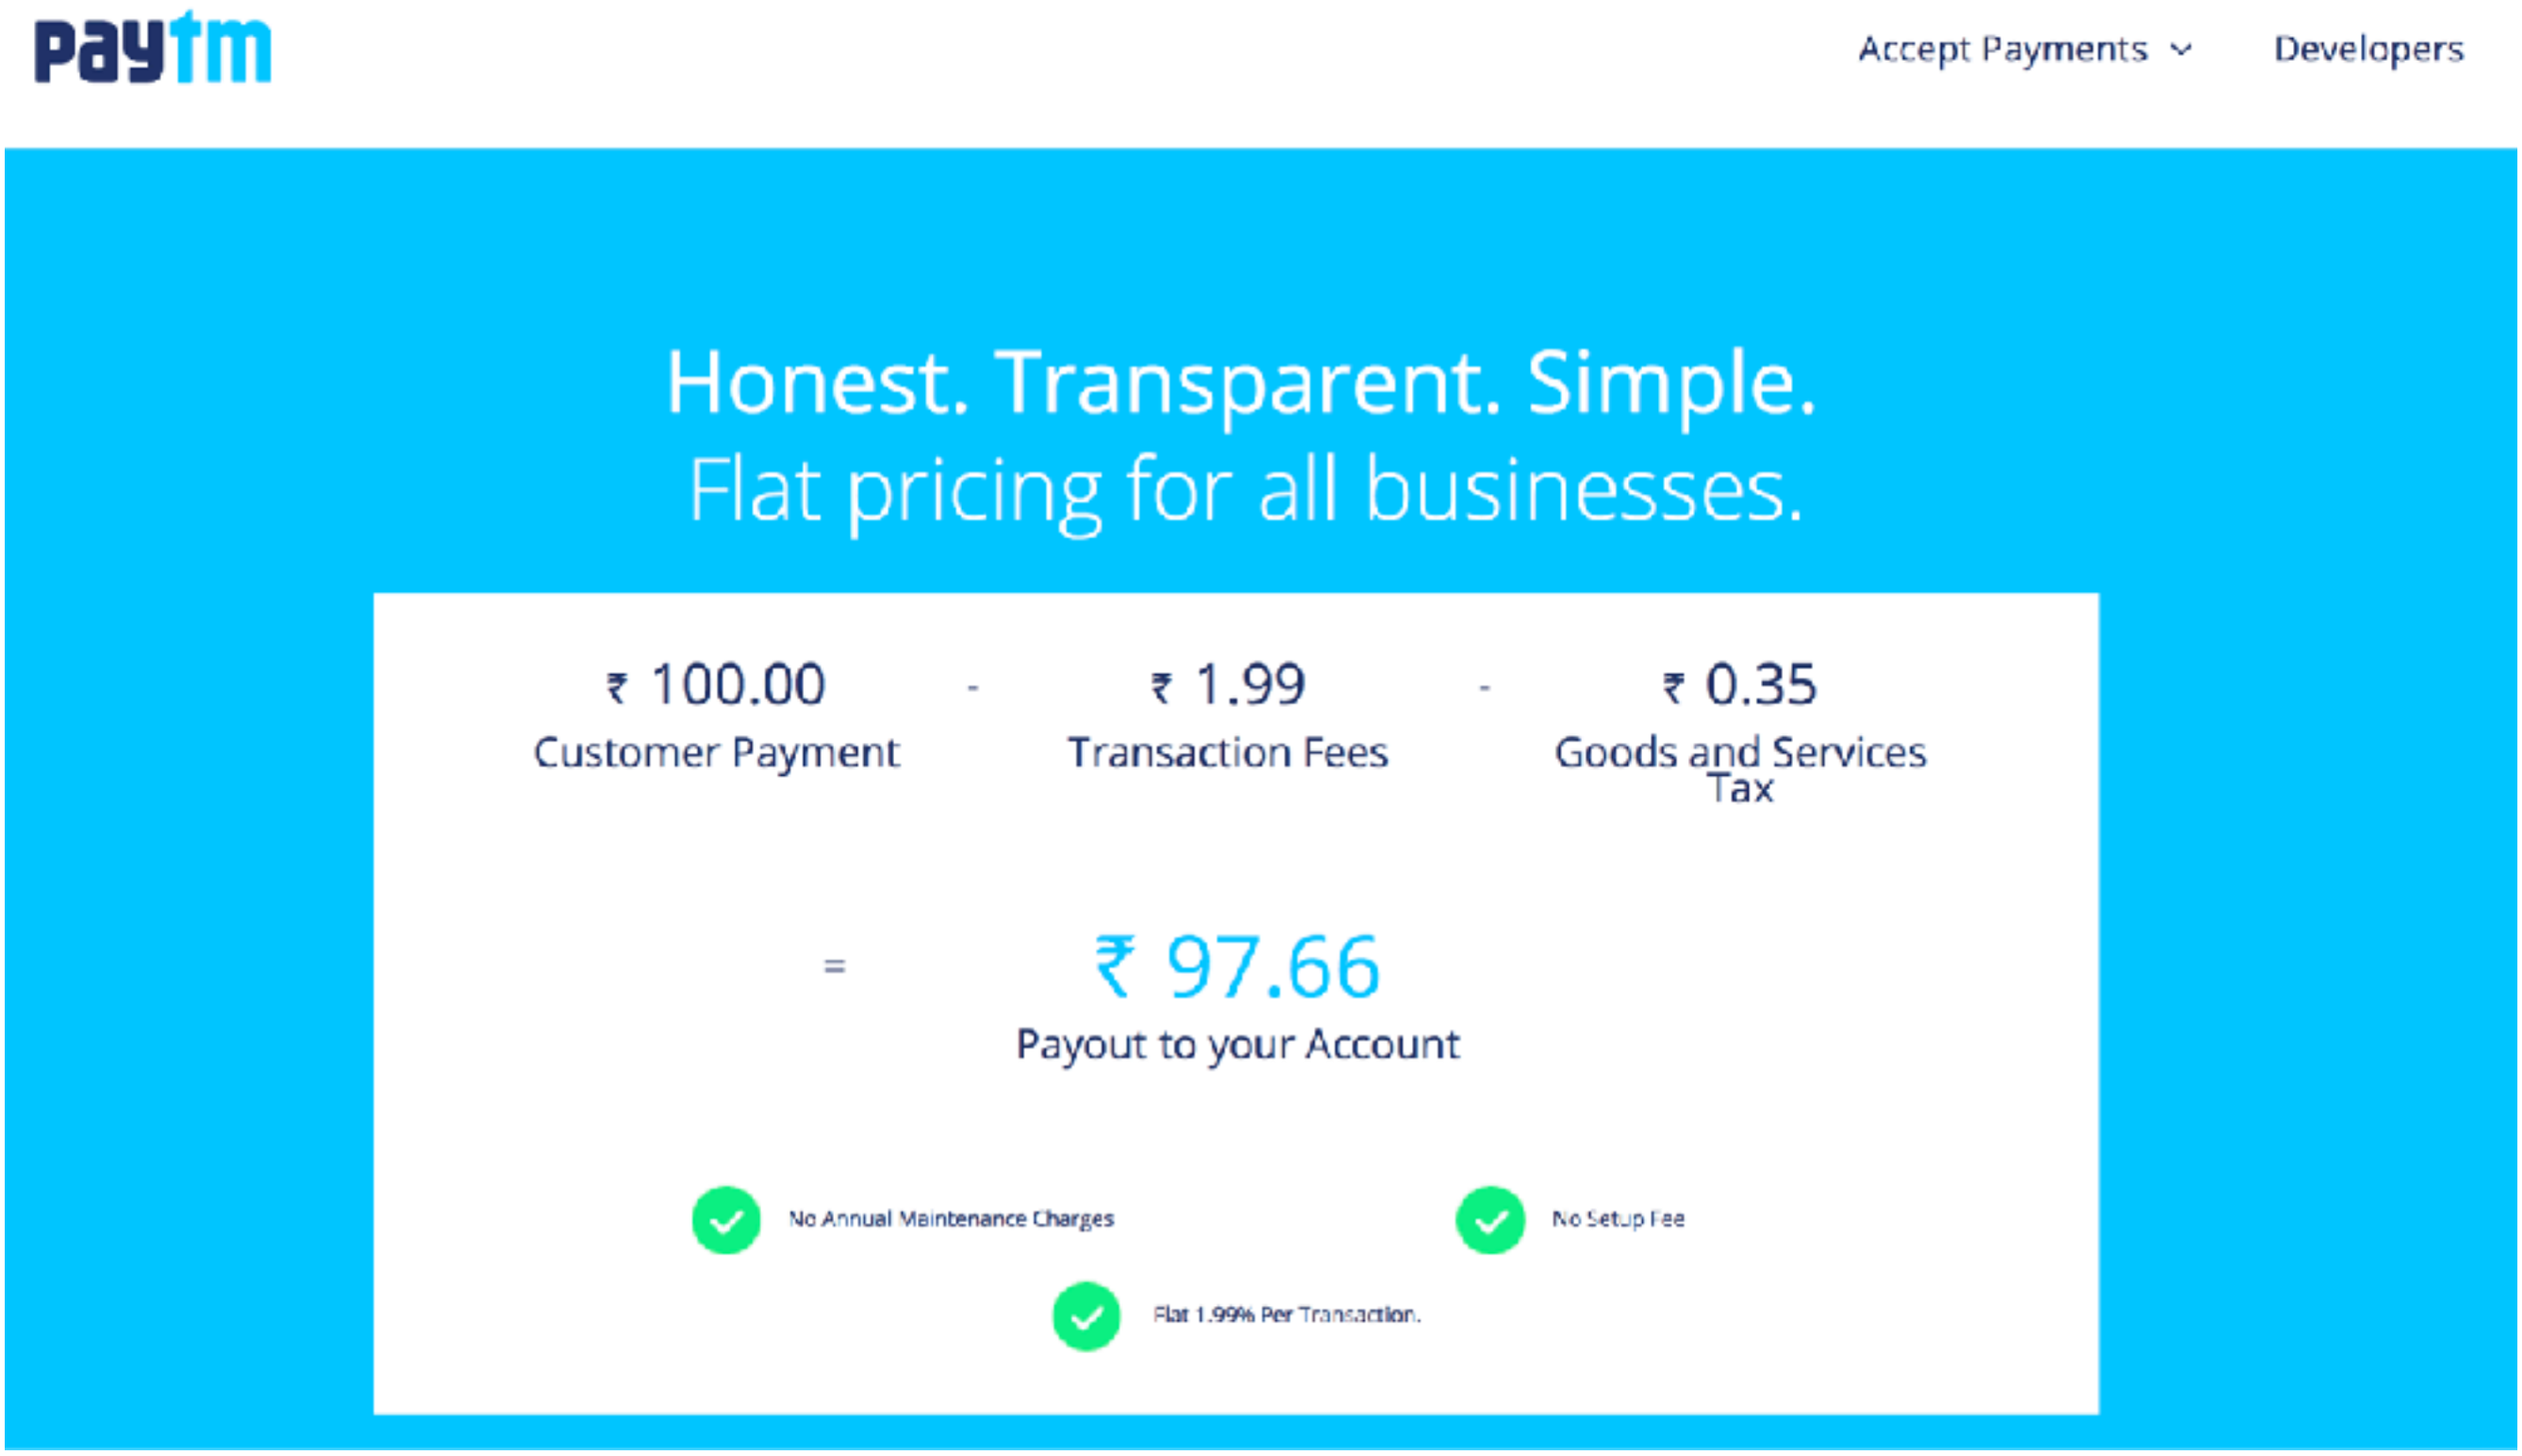
Digital transactions to increase exponentially by 2020





Services like Paytm charges hefty amount for each transactions made through their services.

Internet is entering second era of future based on blockchain

This second era will be powered by a clever combination of cryptography, mathematics, software engineering and behavioural economics.

KLOTZ

Like paper money and gold before it, Bitcoin and other alternative currencies allow parties to exchange value. Unlike their predecessors, they are digital and decentralized. For the first time in history, individuals can exchange value without intermediaries which historically have been a source of friction and expense.
